FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES

Digest

New Exchange Rates Apply to Agricultural Trade (see p. 5). As a result of the Smithsonian Agreement of December 18, 1971, monetary actions were taken by 117 nations. Almost two-thirds of U.S. agricultural exports in 1970/71 went to 62 nations whose currency appreciated against the dollar. Other factors aside, this makes prices of U.S. exports more attractive. About a third of our exports went to 47 nations whose currency did not change in relationship to the dollar. Only 3.7 percent of our exports went to nations that depreciated against the dollar, which raises the foreign currency price of goods imported from the United States. Nearly 60 percent of U.S. agricultural imports came from nations that did not change the value of their currency relative to the dollar, and prices of agricultural imports, as a result of devaluation alone, increased only 1.3 percent on the average.

* * * * *

Agricultural Import Customs Duties Decline Further in 1971 (see p. 11). Duties on U.S. agricultural imports averaged 5.1 percent during 1971, compared with 5.4 percent 2 years earlier and 5.8 percent in 1967. Reciprocal tariff reductions by the United States and other major importing countries contributed to the decline. Average U.S. duties were lower in 1971 despite the surcharge in effect during the last 4 months. Most agricultural imports were exempt from the surcharge. Ad valorem equivalent tariffs on dutiable agricultural imports averaged 8.8 percent, against 9.4 percent in 1969 and nearly 11 percent 5 years ago.

* * * * *

Commercial and Government Program Export Highlights, 1971 (see p. 19). U.S. exports of farm products in calendar 1971 rose \$436 million to a record \$7.7 billion, with nearly all of the rise in commercial shipments. Exports of oilseeds and products advanced briskly to a high of \$2.2 billion from \$1.9 billion in 1970 and \$1.3 billion in 1969. Exports of cotton, butter, protein meal, and cottonseed and soybean oils all rose sharply in 1971. Feed grain, rice, wheat, and tobacco exports were somewhat lower.

Exports under P.L. 480 amounted to \$971 million (preliminary data), compared with \$1.02 billion a year earlier. Local currency sales fell sharply as long-term dollar credit shipments moved upward. Donations under Title II were about the same as in 1970. Barter sales rose to a record \$935 million and CCC credit sales were up considerably. Mutual Security (AID) shipments rose to \$86 million, the largest amount reported since 1961.

* * * * *

Selected Price Series of International Significance (see p. 45). Feed grain prices, c.i.f. U.K. and c.i.f. Rotterdam, declined slightly in February, but U.S. export and farm prices for corn were steady. Similarly, Canadian wheat, c.i.f. U.K., was down while wheat export prices in Canada and the United States were unchanged. However, the price of U.S. wheat, c.i.f. U.K., was up 2.6 percent. Soybean and cotton prices, c.i.f. U.K., also were up.

EC Council Raises Corn Price Above Commission Proposals (see p. 48). The European Community (EC) Council adopted farm price increases for 1972/73 which in most instances differ from Commission proposals. The target price for corn will go up 5 percent, but the levy discount of 7.50 units of account a metric ton for seaborne feed grain imports to Italy will continue. Target and intervention prices for wheat and barley will increase 4 percent. The orientation price of calves will not be increased, but cattle will go up 4 percent as of April 1 and further incentives will be announced by September 15. The target price of milk will rise by 8 percent. The unit of account was left unchanged and compensatory import levies and export subsidies for extra-EC trade as well as intra-EC trade will continue.

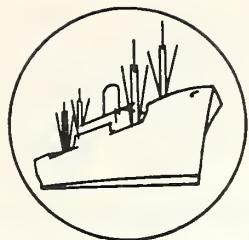

* * * * *

U.S. Agricultural Exports Up 2 Percent in July-February 1971/72 (see p. 51). With a record \$715 million in February, agricultural exports in the first 8 months of 1971/72 rose 2 percent to \$5.3 billion, with all the value gain stemming from higher prices. Record tobacco exports during January and February accounted for most of the rise in total farm products. Export values also were higher for cotton, soybeans, protein meal, cottonseed oil, nuts, butter, and fresh fruits and vegetables. Partly offsetting was a 13-percent lower volume for grain in July-February despite a large rice volume in February.

* * * * *

U.S. Agricultural Imports, July-February 1971/72 (see p. 56). During the first 8 months of 1971/72, U.S. imports of farm products rose 6 percent in value to \$4 billion. Supplementary items were 8 percent higher, due principally to cattle, beef, pork, sugar, cashew nuts, tobacco, and wine. A 4-percent gain for complementary products resulted mainly from additional coffee, tea, and rubber purchases. Sharp monthly fluctuations followed longshoremen's strikes on both coasts.

NEW EXCHANGE RATES APPLY TO AGRICULTURAL TRADE

by
O. Halbert Goolsby 1/

In a meeting on December 18, 1971, the 10 leading economic powers of the non-communist world (the Group of Ten) decided upon new rates of exchange for their currencies. This meeting represented the first time in modern history that exchange rates for major trading nations have been established within the framework of a multinational conference. Upon the announcement of the new rates, all but a few of the other 110 member^s of the International Monetary Fund (IMF) announced their intentions regarding foreign exchange practices.

There were basically 3 decisions for all free world nations to make:

- 1) What was the new exchange rate to be?
- 2) Would a member avail itself of the wider margins devised by the Group of Ten? That is, would a country with a "fixed" exchange rate now permit the value of its currency to fluctuate in the foreign exchange market 2-1/4 percent above and below the established rate? Previously only 1 percent had been permitted by IMF rules.
- 3) What type of exchange rate or system was to exist? For example, was the new rate to be a par value, a central rate, or was the rate to be established as market forces dictated?

The actions of 117 members are shown in table 1.

One of the major objectives of the Group of Ten meeting was to devalue the dollar. Although the United States could unilaterally increase the dollar price of gold, the dollar would not necessarily be devalued. Other nations could nullify a U.S. devaluation simply by increasing to the same extent the price of gold in terms of their own currencies. Except for Canada, the foreign members of the Group of Ten decided to effectively let the dollar devalue. In subsequent weeks, 54 other nations decided to do likewise.

However, 47 nations found it necessary to devalue along with the dollar. Some devaluations were formal and others were accomplished by letting a currency float in exchange markets, as was done for the Canadian dollar. As a direct result of a

1/ Pegged to French franc which moves in wider margins.

2/ No official decision communicated to International Monetary Fund.

3/ Applicable to all trade except certain agricultural exports which are accorded a premium of 35 percent.

4/ Pegged to Spanish peseta which moves in wider margins.

5/ Pegged to pound sterling which moves in wider margins.

6/ Applicable to all transactions except that a 10 percent surcharge tax is levied on certain commodities exported.

7/ Not a member of the International Monetary Fund and consequently not required to follow IMF regulations.

general currency realignment of exchange rates, currencies floating in exchange markets do not change in value relative to the dollar. However, some secondary or indirect market forces may affect these rates. Consequently, the dollar might not remain exactly in the same relationship with a particular floating currency, but by and large not much change is likely.

Eight nations took official actions to devalue against the dollar -- which in effect means the dollar appreciated relative to these currencies. Fortunately, these countries are not large markets for our farm products. Table 2 summarizes the actions taken.

Table 2.--Monetary moves following Smithsonian Agreement and U.S. farm trade impact

Monetary action	: U.S. farm exports, : U.S. farm imports,			
	: 1970/71 : 1970/71			
	: Countries: : Percent :		: Percent	
	: Value :	of	: Value :	of
	: : total :		: : total :	
	: Number	Mil.dol.	Percent	Mil.dol.
				Percent
I. Appreciated relative to the dollar	62	4,738.9	64.2	2,141.3
A. Appreciated against gold	8	2,637.3	35.7	385.3
B. No change against gold	44	1,213.1	16.4	1,263.5
C. Depreciated against gold	10	888.5	12.0	492.5
II. No official change relative to the dollar, or floating (incls. Can.) ...	47	2,376.7	32.2	3,316.3
III. Depreciated relative to the dollar	8	270.6	3.7	146.7
Total	117	7,386.2	100.0	5,604.3
				100.0

These 117 countries account for about 96 percent of our agricultural trade.

The 8 countries that appreciated against gold necessarily appreciated against the dollar by more than 8.57 percent. The 44 countries that did not change their relationship to gold appreciated against the dollar by exactly 8.57 percent since the dollar was adjusted downward relative to gold by this amount. The dollar was not permitted to devalue by the full 8.57 percent against the currency of 10 nations. These nations partially offset the dollar devaluation by devaluing their own currencies against gold somewhat less than the percentage decline of the dollar against gold. Eight countries devalued relative to gold by a greater extent than the dollar was devalued and consequently the dollar was actually appreciated relative to these currencies.

In table 1 the column giving the percent change in exchange rates in terms of U.S. dollars represents the increase in the price of imports (resulting from currency realignments only). For example, a German item which sold for 100 marks previously cost an American \$27.32. Subsequent to the dollar devaluation it takes \$31.03 to purchase the same item -- an increase of 13.6 percent.

To determine the change in export prices, the column giving the percent change in terms of foreign currency units should be used. A German importer can now buy a \$10,000 item from an American exporter with only 32,225 marks which previously cost 36,600 marks -- a reduction of 12 percent. This assumes, of course, that the effects of the dollar devaluation are allowed to influence the price of imported goods. This is not always the case. For example, the reduction does not occur for agricultural commodities subject to the Common Market's variable-levy system. For these commodities, a compensatory tax on imports is imposed by the European Community to offset the currency realignment. Furthermore, the reduction in price in terms of foreign currencies (marks in this example) may increase the import demand for a commodity in short supply on the world market. Under these conditions there might be an increase in the dollar price of U.S. farm exports.

Using the value of agricultural exports and imports as a basis of weighting, the average price decline in agricultural exports caused by the currency realignments was 5.7 percent. When commercial exports only are considered, the weighted average was 6.4 percent. The average increase for agricultural imports was only 1.3 percent.

Six different type of exchange rates are listed in the last column of table 1.

A par value is an exchange rate which a country agrees to change only when (1) there is a basic disequilibrium in its international transactions and (2) upon formal notification to, and approval by, the IMF.

A central rate (CR) is a rate adopted by a number of nations as a result of the Smithsonian Agreement of December 18. It is a stable rate but can be changed with a lesser degree of formality than that required to change a par value.

A unitary rate is a stable rate which a country is presently maintaining. However, no agreement, or only an informal agreement, is held with the IMF regarding its maintenance.

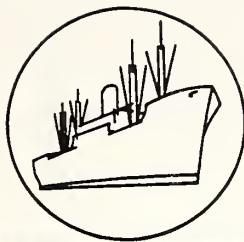

As used here, a trade exchange rate means a rate that is stable and can be applied to agricultural trade. For France, members of the French franc area, and several other countries, the rate is also applicable to nonagricultural trade.

A floating exchange rate is one that varies over time, in many cases daily. This rate may vary entirely as a result of market forces or may be influenced partially by government (Central Bank) actions.

A multiple exchange rate denotes a system that contains more than one exchange rate applicable to agricultural trade.

The distribution of nations using various rates is as follows:

Rate	:	Countries	:	Percent of total
	:			
	:			
	:			
	:			
Par	:	35		30
Central rate	:	32		27
Unitary	:	11		10

SPECIAL in this issue

AGRICULTURAL IMPORT CUSTOMS DUTIES DECLINE FURTHER IN 1971

Duties paid on agricultural products in 1971 amounted to \$298 million, or 5.1 percent of the total U.S. agricultural import value. In comparison, duties were 5.4 percent of agricultural imports in 1969 and 5.8 percent for 2 preceding years. Duty rates have declined following reciprocal trade concessions among most major trading countries. The most recent tariff reduction agreements were concluded in 1967 at Geneva, Switzerland. A 5-year staged tariff reduction beginning in 1968 terminated on January 1, 1972, after sharply reducing or removing tariff rates on many agricultural commodities.

Dutiable commodities accounted for \$3.4 billion or 58 percent of U.S. agricultural imports during 1971. The ad valorem equivalent rate for dutiable items averaged 8.8 percent, compared with 9.4 percent in 1969 and 10.7 percent 5 years earlier.

An import surcharge imposed on some agricultural products during the last 4 months of 1971 affected about 27 percent of agricultural imports. Duty rates increased up to 10 percent ad valorem for commodities affected. Surcharge exemptions included duty-free commodities, quota-controlled items (such as, beef, veal, mutton, sugar, and certain dairy products), and commodities with maximum statutory rates set by the Tariff Act of 1930. Maximum Statutory Tariff Act rates could not be exceeded on some sizable imports including canned pork, feeder cattle, and some fruits and vegetables. Advance purchasing by many importers in anticipation of longshoremen's strikes shifted imports into periods preceding the August 15 surcharge imposition. The effects of the surcharge were therefore diminished.

Duty-free commodities accounted for \$2.4 billion or 42 percent of agricultural imports in 1971. Tropical products such as coffee, cocoa beans, bananas, tea, rubber, copra, essential oils, cordage fibers, spices, and most nuts enter free of duty. Some temperate-zone commodities also enter duty-free, including pedigreed animals, most hides and skins, casein, carpet wools, raw silk, sausage casings, many vegetable oils, and crude drugs.

Duty rates for nonagricultural products are slightly higher than for agricultural goods. Nonagricultural duties have also declined, averaging 6.2 percent in 1971 against 7.4 percent in 1969. Two-thirds of nonagricultural products are dutiable.

Duty rates on agricultural commodities are itemized in the following tables 3-4. Table 3 shows major commodity groupings, the proportion of dutiable products within each group, calculated rates for dutiable goods, and ad valorem duties in relation to total farm product imports. The dollar value of duties collected was extracted from U.S. Department of Commerce publication IM 146, U.S. Imports for Consumption. Table 4 shows commodity group composition and duty rates in more detail.

Table 3.--U.S. agricultural import duties: Summary of duty-free values, dutiable values, calculated duties, and ad valorem equivalent rates by commodity group, calendar year 1971

Commodity group	Duty-free value	Dutiable value	Total value	Duties	Ad valorem equivalent of dutiable value	Ad valorem equivalent of total value
	1,000 dollars	1,000 dollars	1,000 dollars	1,000 dollars	Percent	Percent
Animals, live	19,190	119,178	138,368	7,949	6.7	5.7
Dairy products and eggs . . .	28,010	89,693	117,703	10,916	12.2	9.3
Hides and skins	102,044	2,966	105,010	41	1.4	---
Meats and meat products . . .	2,003	1,045,840	1,047,843	58,898	5.6	5.6

Commercial and Government Program Export Highlights

CALENDAR YEAR 1971

The Nation's total agricultural exports advanced \$436 million during calendar 1971 to an alltime high of \$7.7 billion, with virtually all of the gain in commercial shipments. Although P.L. 480 exports declined 5 percent to \$971 million, a sizable gain in AID exports brought total Government-financed exports to \$1.06 billion, slightly above the 1970 level. With a 7-percent climb in commercial sales to \$6.6 billion, the proportion of P.L. 480 shipments to total U.S. farm exports dropped to 12.6 percent from 14.1 percent a year earlier (table 5).

Sales for local (foreign) currency last year dropped \$105 million to \$171 million, the least in 17 years of P.L. 480 exports. The program was discontinued at the end of 1971. Shipments under this program peaked at \$1.23 billion in 1964 and then declined steadily. The 1955-71 cumulative local currency exports under P.L. 480 (food for peace) programs totaled \$12.2 billion, averaging \$718 million annually. While no new Title I local currency sales agreements are permitted, some 1972 shipments will be necessary to fulfill the terms of prior contracts.

Long-term dollar and convertible foreign currency credit sales have advanced each year, discounting a moderate drop in 1967, since the beginning of the program in 1961. The \$509 million worth of U.S. farm products shipped under these arrangements in 1971 represented over 52 percent of the P.L. 480 total. Ten years earlier, long-term credit sales accounted for only \$1 million of P.L. 480's \$1.3 billion total; 1970's \$490 million was 48 percent of P.L. 480 shipments.

Government-to-government donations for disaster relief and economic development under Title II amounted to \$139 million, up 8 percent from 1970. Donations through voluntary agencies in 1971 totaled nearly \$152 million, up a fifth.

Wheat, rice, cotton, and soybean oil accounted for 63 percent of Government program exports in 1971. Compared with a year earlier, wheat and rice movements were lower, cotton and soybean oil were higher, there were smaller exports of wheat flour, tobacco, and lard, but more feed grains, tallow, soybean meal, evaporated milk, corn-soya-milk, and wheat-soya-blend.

Farm products bartered for overseas procurement for U.S. agencies rose 59 percent to a record \$935 million in 1971. Cotton shipments accounted for more than half of the gain. There were significant increases for all principal barter commodities except soybean oil, which was down about 12 percent to \$72 million. Shipments under the CCC credit sales program advanced nearly a fourth to \$369 million while exports under Export-Import Bank loans and guarantees increased just over \$10 million to more than \$94 million. Annual totals of exports under overseas procurement barter and short-term credit sales programs are included with commercial sales in "exports outside Government-financed programs" in table 5, but are shown separately in table 6.

With the phasing out of the Title I foreign-currency program at the end of 1971, several long-time P.L. 480 importers have either reduced their takings under P.L. 480 or switched to long-term credit purchases. Others have increased their purchases through commercial channels. Another factor in the reduction of P.L. 480 exports is the greater participation in food aid programs by Canada, Japan, the European Community, and other developed countries that now move more of their surplus agricultural products to developing countries.

Dollar sales of U.S. agricultural products to world markets have been stimulated through aggressive export promotion efforts made possible through funds generated under P.L. 480. Commercial export sales of American farm products grew from \$2.1 billion in 1955 to a record \$6.6 billion in 1971. Meanwhile, sales under Government-financed programs (including both P.L. 480 and AID), after reaching a peak of \$1.7 billion in 1957, declined substantially and have remained just above the \$1 billion level the past 3 years.

Several countries whose imports of U.S. farm commodities formerly were financed largely under P.L. 480 made notable contributions toward the 1971 commercial sales record. Japan, Italy, and Spain were in first, sixth, and tenth places as U.S. dollar markets. In 1970, Taiwan took \$134 million of U.S. farm products, all for dollars; 1971 purchases included \$151 million through commercial channels and \$11 million under P.L. 480 agreements. In the late 1950's Taiwan's imports of U.S. farm products were nearly all under Government-financed programs. Of the \$75 million increase in U.S. agricultural exports to the Republic of Korea during 1971, more than \$70 million were commercial sales for dollars.

Exports Under Supply-Type Barter Contracts for U.S. Agencies and Credit Sales Programs

Farm products bartered for overseas procurement goods for U.S. agencies rose \$348 million to a record \$935 million in 1971. Shipments under the CCC short-term credit sales programs and Export-Import Bank loans and medium-term guarantees totaled \$463 million, up a fifth. These exports are classified as commercial sales or "exports outside Government-financed programs." Such trade results in dollar savings in the U.S. balance of payments. CCC credit sales and Export-Import Bank loans and guarantees help to increase the competitive position of U.S. farm products in major markets with credit arrangements similar to those of other supplying nations.

There were no agricultural exports under barter contracts for strategic materials in 1971.

Commodity Review

Wheat--Both commercial and Government-program shipments were lower in 1971. Declining program exports accounted for nine-tenths of the drop in wheat sales. In 1971, Government program exports valued at \$289 million accounted for 29 percent of U.S. wheat exports, down from 31 percent in 1970. Smaller shipments under Government programs went to India, Pakistan, Colombia, and Korea but larger shipments moved to Morocco, Tunisia, Iran, South Vietnam, and Brazil. Exports under the barter program increased 7 percent to 87 million bushels. Principal barter markets for wheat were Brazil, Yugoslavia, Colombia, Peru, Taiwan, Syria, and Israel.

Local currency wheat sales declined sharply to India and Korea, increased slightly to Pakistan, and doubled to South Vietnam. Among the major long-term dollar credit markets, shipments were off sharply to India, Pakistan, and Colombia, but were notably larger to Korea, Brazil, Iran, Morocco, and Tunisia. Shipments to Turkey and Israel were about the same as in 1970.

Rice.--U.S. rice exports fell \$59 million to \$256 million. Smaller Government-program shipments accounted for two-thirds of the decline. Local currency sales in 1971 dropped to \$21 million, all to Pakistan and South Vietnam, from 1970's \$68 million, all to India.

Indonesia and the Republic of Korea, as in 1970, took most of the rice sold under long-term dollar credit arrangements. India received about 93 percent of the \$11.6 million worth of rice shipped under Government-to-government donations. All of the \$30 million worth of rice exported under the AID program went to the Republic of Korea and South Vietnam. Barter exports nearly tripled to \$30 million as CCC credit sales declined a fifth to \$20 million.

Feed grains.--P.L. 480 shipments accounted for $7\frac{1}{2}$ percent of total U.S. feed grain exports valued at \$972 million in 1971. South Vietnam received \$6 million worth of corn for local currency, about the same as the year before. Under long-term credit, sorghum grain moved to Israel, barley to Lebanon and Israel, and corn mainly to the Republic of Korea and Israel. Feed grain shipments under barter contracts for overseas procurement nearly doubled to \$113 million. Feed grain exports under CCC credit sales rose a fifth to \$49 million.

Cotton.--U.S. cotton exports advanced a whopping 57 percent to \$583 million. Commercial sales accounted for 94 percent of the gain. Sales under the long-term dollar credit programs, mainly to India, Indonesia, the Philippines, and the Republic of Korea gained \$24 million, a little more than offsetting a sharp decline in local currency shipments. The value of cotton bartered for overseas procurement nearly tripled to \$298 million. Principal barter markets for U.S. cotton were Japan, Taiwan, Canada, Hong Kong, India, the United Kingdom, the European Community, the Republic of Korea, and Thailand. Cotton exports advanced \$17 million under Export-Import Bank loans and CCC credit sales to \$143 million in 1971.

Tobacco.--Exports under Title I, P.L. 480, totaled \$20 million, down slightly from a year earlier. Government-financed exports represented 4 percent of total U.S. tobacco shipments, about the same as in 1970. A small gain in sales for local currency was more than offset by a \$7.5 million drop in long-term credit exports. South Vietnam and Cambodia received tobacco for local currency. Major long-term credit destinations were the Philippines, Pakistan, and the Dominican Republic. Barter exports of tobacco increased \$25 million to exceed \$155 million in 1971. Tobacco sales under Export-Import Bank loans and CCC credits totaled \$64 million, unchanged from the previous year.

Oilseeds and products.--U.S. exports rose 13 percent to \$2.18 billion in 1971. Five percent moved under Government-financed programs. Soybean oil shipments, which accounted for nearly all of the program exports, increased moderately under all Government programs except for a sharp decline in local currency sales. Barter shipments of soybean oil declined but CCC credit sales rose sharply to \$35 million from less than \$7 million in 1970.

Dairy products.--Larger commercial exports accounted for nearly all of the \$47 million gain in 1971. Butter exports to the United Kingdom accounted for most of the sharp advance in sales of dairy products. Local currency sales of nonfat dry milk and evaporated milk moved up to \$15 million from \$6 million, and a brisk rise in donations by voluntary agencies nearly offset a sharp drop in Government-to-government donations.

Animals and products, except dairy products.--Exports totaled \$782 million, up 8 percent. Just 5 percent of these products were exported under Government-financed programs. Small amounts of tallow went to Ghana for local currency and to Ghana and the Republic of Korea under long-term credit, but most of these Government-program exports moved to India, Turkey, Pakistan, and Morocco under the Mutual Security (AID) program.

Fruits and vegetables and preparations.--U.S. exports of fruits and vegetables totaled \$562 million, up \$22 million from 1970. All shipments in 1971 were commercial sales for dollars.

Commercial and Government-program exports of U.S. farm products for July-December 1971 are summarized in tables 18-23.

Table 5.--U.S. agricultural exports under and outside specified Government-financed programs and total agricultural exports:

1/ Shipments under overseas procurement barter contracts are authorized by the CCC Charter Act and are essentially equivalent to dollar sales since they offset the dollar outflow for foreign purchases by U.S. agencies with a dollar inflow for agricultural commodities.

2/ Shipments under Export-Import Bank loans and guarantees and under the CCC credit sales program are credits for relatively short periods repayable in dollars plus interest (covering the costs of the lending agency).

1/ Less than 500.

2/ Total exports include those reported by Census plus foreign donations through voluntary relief agencies. Relief shipments of these commodities are not separately reported by Census.

3/ The excess of Government program shipments over total exports may be attributed to lags in reporting or to differences in classification procedures.

4/ Total exports include those reported by Census plus Government-to-government donations. Nonrelief shipments of these items are not separately reported by Census.

5/ Reported in value only.

6/ Less than \$50,000.

1/ Negative values in the commercial columns, indicating an excess of Government program exports over total exports, may be attributed to lags in reporting or to differences in classification procedures.

2/ Beginning Jan. 1, 1971, classified as British Pacific Islands, and Pacific Islands, n.e.c., formerly British Western Pacific Islands.

3/ Beginning Jan. 1, 1971, classified as Spanish Africa, n.e.c. and Equatorial Guinea, formerly Spanish Africa, n.e.c., Equatorial Guinea.

4/ Beginning Jan. 1, 1971, classified as Mali, Niger, Chad, Upper Volta, Dahomey, and Congo (Brazzaville), formerly included in Western Africa, n.e.c.

5/ Beginning Jan. 1, 1971, classified as Burundi and Rwanda, formerly included in Burundi-Rwanda.

6/ Beginning Jan. 1, 1971, classified as Malagasy Republic and French Indian Ocean Areas, formerly included in Malagasy Republic.

7/ Beginning Jan. 1, 1971, classified as Botswana, Swaziland, and Lesotho, formerly included in Southern Africa, n.e.c.

Other	23.8	28.2	+4.4	277.8	182.4	-95.4

1/ Includes sales for foreign currency, long-term dollar and convertible local currency credit sales, Government-to-government donations, and donations through voluntary relief agencies authorized by P.L. 480, as amended; and exports under Mutual Security (AID) programs authorized by P.L. 87-195.

2/ "Exports outside specified Government-financed programs" or "Commercial sales" include, in addition to unassisted commercial transactions, shipments of some commodities with government assistance in the form of (1) barter transactions involving overseas procurement for U.S. agencies, which benefit the balance of payments and rely primarily on authority other than P.L. 480; (2) extension of credits and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash.

3/ Preliminary.

1/ Credits for relatively short periods repayable in dollars plus interest (covering the financing costs of the lending agency).

2/ Includes disbursements by the Export-Import Bank and disbursements by U.S. commercial banks under Export-Import Bank medium-term guarantees against political and financial risk.

3/ Less than \$50,000.

International Price Highlights

SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

Feed grain prices in the United Kingdom dropped from January to February. Although the price of sorghum grain declined more than the price of U.S. No. 3 yellow corn, corn remained lower than sorghum grain. Argentine corn, c.i.f. U.K., at 27.19 pounds sterling a long ton, was quoted lower than in January despite the reduced crop now being harvested. U.S. No. 3 yellow corn was down 2.2 percent to 22.44 pounds sterling, 4.75 pounds sterling less than Argentine corn and 3.01 pounds sterling less than sorghum grain. In Rotterdam, both U.S. No. 3 yellow and Argentine corn were quoted slightly lower than in January; but the export price for U.S. No. 2 yellow corn, f.o.b. vessel, Gulf ports, was a little higher.

U.S. farmers received \$1.09 a bushel for corn, unchanged from January. The spread between the farm and export price at Gulf ports was 22 cents a bushel or \$8.66 a metric ton; between Gulf ports and Rotterdam, 11 cents a bushel or \$4.33 a ton; and between Rotterdam and Tilbury (the port of London), 3.7 cents a bushel or \$1.45 a ton.

Tilbury with its large, modern, efficient facilities is becoming increasingly important in the grain import trade of the United Kingdom, and the differential between higher c.i.f. United Kingdom and lower c.i.f. Rotterdam prices is diminishing.

No. 1 Canadian Western Red Spring wheat, 14 percent protein, c.i.f. U.K. (Tilbury), was quoted at an average 29.15 pounds sterling a long ton in February, 2.3 percent below January. The drop reflects a time discount -- the changeover from January as the nearest forward month to May, after the resumption of shipping on the Great Lakes. The same type and grade of wheat was quoted at \$1.66 a bushel, in store Fort William-Port Arthur-Thunder Bay, unchanged from January. 1/

The buyer's and seller's prices of U.S. No. 2 Hard Winter wheat, ordinary protein, at Gulf ports also remained unchanged at \$1.63 and \$1.74 a bushel, respectively. A year ago, buyer's and seller's prices were both \$1.72 and there was no export payment. Since December 1971, the export payment has been 11 cents a bushel and the seller's price has exceeded the buyer's price by that amount.

The price of U.S. No. 2 Hard Winter wheat, c.i.f. U.K., rose 2.6 percent in February. At 26.80 pounds sterling a long ton, the price was still considerably below the level of several years but was 1.7 percent above the price of Australian wheat. In January, U.S. and Australian wheat prices were about the same. Prices of U.S., Canadian, and

1/ In line with the new Canadian wheat classification system, FATUS, effective with this issue, reports Canadian export and U.K. c.i.f. prices for the same type and grade of wheat, No. 1 Canadian Western Red Spring wheat, 14 percent protein. Previously, Manitoba No. 1 wheat, in store Fort William-Port Arthur-Thunder Bay, was reported as an export price.

Australian wheat ranged 14-17 percent below a year earlier, although converted to dollars the price of U.S. wheat was down only 9.5 percent as a result of devaluation.

The export price of Thai rice was \$129.69 a metric ton, down seasonally 2 percent from January but up 3 percent from a year earlier. Between January and February 1971, Thai rice suffered an unseasonably large 17-percent price drop.

The price of U.S. No. 2 soybeans, c.i.f. U.K., rose 1.2 percent from January to February to 52.77 pounds sterling a long ton. Compared with a year earlier, it was down 4 percent in terms of pounds sterling but up 4 percent in dollars. The cotton price continued to climb, averaging 41.68 cents a pound in February.

EC COUNCIL RAISES CORN PRICE ABOVE COMMISSION PROPOSALS

The EC Council on March 24 agreed on farm price increases for 1972/73 (see table 25). Nothing was announced concerning 1973/74 prices. The Council acted on Commission proposals which contained many 2-step price increases with second steps contemplated for 1973/74. A 5-percent increase over 1971/72 of the beginning target price for corn was the most important for our farm exports. The EC Commission had recommended a 4-percent increase in the target price of 96.90 units of account (u.a.) ^{1/} a metric ton at the beginning of the August 1971-July 1972 year. It will be raised instead by 4.85 u.a. to 101.75 u.a.

Last August, at the beginning of the current EC grain-marketing year, the world corn price was high and the EC variable-import levy was 34.91 u.a. a metric ton. At the same world corn price the levy will rise by 13.9 percent to 39.76 u.a. With the world corn price as low as it was last December, when the levy was 41.25 u.a., the EC price level fixed for next year will raise the levy to 46.10 u.a., up 11.8 percent.

The target price for barley will go from 100.21 u.a. to 104.22 u.a., an increase of 4 percent; this compares with a Commission-proposed increase of 4.3 percent. However, the intervention (support) price for barley will also go up 4 percent, more than the Commission's proposed 3.8 percent. Despite the steeper increase for corn and the slightly smaller increase for barley, corn will exceed barley by 2.47 u.a. a metric ton, a narrower difference than the Commission proposal of 3.20 u.a. The uneconomic nature of barley priced higher than corn is modified by seasonal and locational factors. The unfavorable effect to U.S. and other third-country corn exporters of a further increase in the EC corn price level will be mitigated by a 1-year extension of the levy discount of 7.50 u.a. a metric ton on seaborne feed grain imports into Italy.

The Council fixed the intervention (support) price for nondurum wheat higher than had been proposed by the Commission. Increases of 4 percent were provided for both target and intervention prices of nondurum wheat and barley. The Commission had proposed raising the intervention prices for the major small grains one-half percentage point less than their target prices in order to discourage their sale to intervention agencies and to encourage their movement through regular market channels.

The target price of husked rice was raised by 4.7 percent, as proposed by the Commission. Rice production in Italy in 1972/73 will be affected by 2 opposing economic forces: The retention of the 7.50 u.a. a ton levy discount on corn will make the substitution of corn for rice less attractive than it would have become with a substantially higher corn price. On the other hand, the supply of water for irrigation in the Po Valley is reportedly so limited that no further expansion in rice acreage appears possible.

^{1/} A unit of account was equal to a U.S. dollar before the devaluation authorized by recent U.S. legislation, approved April 3, 1972.

Table 25.--EC Council agricultural price increases for beginning of 1972 marketing year compared with EC Commission price increase proposals for beginning of 1972 and 1973 seasons, as percentages of beginning 1971 season prices 1/

1/ These beginning season prices are subject to monthly increases for part of the year. The beginning of the season is April for milk and products and for cattle and calves, July for sugar and oilsseeds, August for wheat and feed grains, September for rice, and November for pork and olive oil. Prices proposed for marketing years beginning in 1973 are shown the same as for 1972 where no second-step increases were proposed.

2/ Growers are guaranteed a minimum price of \$147.90 in 1971. The first proposal for 1972 was \$151.00, the recent one was \$153.80 for 1972 and \$155.30 for 1973, and the actual 1972 minimum price will be \$153.80. All quotations are per metric ton.

3/ Minimum beet prices, \$17.00 in 1971, \$17.20 first 1972 proposal, \$17.50 recent proposal; \$17.68 actual 1972 price; target and intervention prices to be fixed with consideration of minimum beet prices and processing margins. All quotations are per metric ton.

4/ On and after September 15, 1972: 4.5 percent above 1971.
5/ Orientation price.
6/ Further premiums to be announced before September 15, 1972.
7/ Base price.
8/ For varieties 11b and 18 (Maryland, Round Tip, Scafati, and Sumatra 1), 8 percent.

NA = Not applicable.

NP = No proposal.

NS = No statement.

Sources: FATUS, Foreign Agricultural Trade of the United States, March 1972, p. 63 and Press Release, Council of the European Communities 608/72 (Press 33), March 24, 1972.

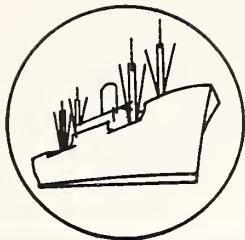

In the oilseed sector, the Council differentiated between rapeseed and sunflowerseed, raising the target prices 3 and 4 percent, respectively. Similarly the intervention price was raised 3.1 percent for rapeseed and 4.1 percent for sunflowerseed. Prices for both are supported by processor payments from the European Agricultural Guidance and Guarantee Fund (FEOGA): Growers are paid for their oilseeds by processors, but processors receive the difference between the EC price level and the world market price level from FEOGA. The raised prices imply increased obligations for FEOGA whether oilseeds are sold to intervention agencies or moved to crushers through commercial marketing channels.

From a competitive standpoint, crop prices are of more direct concern to our export trade than livestock prices, but feeds and feed yielding oilseeds make up most of our agricultural exports to the EC. Thus EC livestock prices are of great concern to the United States. The base price of pork was raised only 3.1 percent. But the market prices for pork and also for poultry and eggs in the EC are a function of feed grain prices.

The target price for milk will go up 8 percent, as recommended by the Commission. The Council, however, raised the intervention price for butter from the current level of 1,780 u.a. a ton to 1,800 u.a. as of April 1 and to 1,860 u.a. as of September 15. The intervention price for skim milk powder was fixed at 540 u.a. a ton, up from 470 u.a. The Commission had proposed no increase in the intervention price for butter but a 20.4-percent increase for skim milk powder, more than the 14.9-percent increase adopted by the Council.

The orientation price for beef was raised only 4 percent effective April, but a further production incentive will be provided by September 15. The Commission had proposed a 9-percent increase. The orientation price for calves was not raised, thus creating an incentive for beef production.

The Council left the unit of account unchanged -- still defined as equal to the price of 888.67088 milligrams (or 1/35 of 1 troy ounce) of fine gold. The upward revaluation of national currencies, particularly the Deutsche mark, lowered prices, variable import levies, and export restitutions (subsidies) in terms of national currencies. A system of compensatory levies on imports from, and of compensatory subsidies on exports to, nonmember and member countries has been used to negate the effect of upward revaluation on farm prices expressed in national currencies. Until now compensatory levy receipts and compensatory export subsidy outlays were on account of the national treasuries of member countries. In the future, these will be on FEOGA account.

Export Highlights

U.S. AGRICULTURAL EXPORTS, JULY-FEBRUARY 1971/72

U.S. agricultural exports in February 1972 totaled \$715 million, sharply above the \$635 million in 1971. Tobacco exports of \$87 million were more than double those in February last year, and accounted for two-thirds of the gain. Other increases were noted for dairy products, soybeans, rice, and soybean meal. Continued heavy movement of tobacco, delayed because of the strike, was the main reason for the unusually high value in February 1972. Exports of cotton, alfalfa meal, and inedible tallow were reduced from West Coast ports because of the longshoremen's strike. But exports through East Coast and Gulf ports were larger as purchasers stepped up buying to hedge against a possible strike before a settlement between the longshoremen and port operators.

Exports during July-February 1971/72 totaled \$5.3 billion, 2 percent more than for the like period in 1970/71. This gain occurred despite the shutdown of West Coast ports from July 1, 1971, to October 6, 1971, and from January 17, 1972, to February 21; and East Coast and Gulf ports from October 1 to November 27, 1971. But West Gulf ports were open most of this period, and other Atlantic and Gulf ports were open part of the time. Foreign demand picked up for cotton, soybeans, and dairy products because tight world supplies left the United States as the only major source for these commodities. Movement of these products was very brisk before and after the strike. In addition, the large volume of tobacco exports in January and February brought the July-February tobacco total 13 percent over the value in 1970/71. Exports of grains were down because of the longshoremen's strike and more plentiful supplies in other major exporting countries.

U.S. exports of grains and preparations fell 14 percent to \$1.63 billion. All major grain exports -- wheat, feed grains, and rice -- were down. Wheat and feed grain exports were off \$149 million and \$133 million, respectively. The 387-million-bushel equivalent of wheat and wheat product exports were 107 million less than a year earlier. Commercial exports to Japan and Western Europe declined sharply and accounted for all of the overall reduction. Exports were also down to the principal developing countries of India, Taiwan, Korea, Philippines, Tunisia, and Colombia. The average unit value of exports rose to \$1.68 a bushel in July-February from \$1.62 a bushel in 1970/71, partly reflecting a higher quality of grain exported. Exports of feed wheat, a low-quality grain, discounted below milling quality wheat, were unusually large in the previous export year. Feed wheat exports were large because feed grain prices were high.

Rice exports totaled 23.7 million bags in July-February 1971/72, a little below the same months of 1970/71. About 47 percent moved under Government programs in the first half of 1971/72, compared with 59 percent for the like period in 1970/71. Rice exports to EC fell to 96 million pounds from 169 million in 1970/71. The EC has purchased more of its rice from Latin America and Asia.

World rice production increased by 2 percent annually in the last 3 years, reducing the demand for U.S. rice in many principal world markets.

1/ Preliminary.

Feed grain exports at 13 million tons during July-February 1971/72 were about one-tenth below the comparable period in 1970/71. The 2-million-ton drop in exports to Japan was more than the overall decline in U.S. exports. Japan stepped up purchases of coarse grains from Australia, South Africa, Thailand, and other developing countries. High feed grain prices in the early part of the year encouraged the substitution of other products in feed rations. Furthermore, Japan allocated about 1.5 million tons of surplus rice for feed use. Exports to Eastern Europe rose to 1.5 million tons in July-February, from .6 million a year earlier. USSR alone accounted for .9 million tons or 60 percent of the total to Eastern Europe. U.S. feed grain exports to EC have done remarkably well considering the sharp expansion in coarse grain output in the EC in 1971. Exports to the EC totaled 5.3 million during July-February 1971/72, compared with 5.2 million in 1970/71.

Exports of oilseeds and products totaled \$1.5 billion, 11 percent above a year earlier. Around two-thirds of the increase stemmed from higher prices, but the volume of soybeans rose 9 million bushels to 300 million bushels.

Exports of cottonseed and soybean oils totaled 1.32 billion pounds, up slightly from July-February 1970/71. Cottonseed oil accounted for most of the increase as soybean oil was down 30 million pounds.

Protein meal exports maintained a high rate through February. July-February 1971/72 exports were 3.2 million tons compared with 2.9 million in 1970/71. Buyers in Western Europe stepped up purchases as a hedge against renewal of the longshoremen's strike at the East Coast and Gulf Coast ports.

Tobacco exports in July-February were up 9 percent to 426 million pounds. The pickup in exports came from the sharp advance in exports to Japan in January and February. But exports also advanced to Denmark, Italy, Taiwan, Thailand, and South Vietnam. However, exports to the United Kingdom were down 12 million pounds from a year earlier.

Cotton exports totaled 2.3 million bales in July-February, compared with 2 million for these months in 1970/71. Exports advanced to Japan, EC, Canada, Indonesia, Taiwan, Korea, Philippines, and Romania. Increased foreign demand for U.S. cotton stemmed from relatively tight world supplies. The average export unit value advanced to \$156 per running bale from \$130 in July-February 1970/71.

U.S. exports of fruits and vegetables totaled \$382 million, up from \$357 million a year before. The increase occurred in fresh fruits, fruit juices, fresh vegetables, and hops. The higher rate has been maintained despite strong foreign competition, little change in U.S. production and supplies, and adverse effects of the longshoremen's strikes.

The \$8 million advance in exports of nuts and preparations is another bright spot in the export situation. Most of the gain was in almonds, but walnuts were also up.

Exports of animals and products rose 11 percent to \$652 million during July-February. Dairy products, hides and skins, and meats gained sharply. The 112 million pounds of butter exported to the United Kingdom accounted for all of the gain in dairy products. Tight world supplies have stimulated U.S. exports of hides and skins. Prices of cattle hides advanced to \$8.57 per piece in 1971/72 from \$7.98 for these months a year earlier.

1/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

4/ Variable levy on sugar-added content. 5/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

Import Highlights

U.S. AGRICULTURAL IMPORTS, JULY-FEBRUARY 1971/72

U.S. agricultural imports during the first 8 months of the current fiscal year amounted to \$4.0 billion compared with \$3.8 billion for July-February 1970/71. Supplementary (competitive or partially competitive) commodities rose 8 percent to \$2.5 billion, and complementary (noncompetitive) products were 4 percent higher at \$1.5 billion. Higher prices accounted for part of the import increases, especially for cattle, beef, and sugar.

Agricultural imports set a record for February, reaching \$591 million. January imports were similarly well above previous January levels at \$576 million. Stepped-up activity at Atlantic ports during the 80-day injunction period and suspension of the supplementary import levy in late December contributed to higher January and February totals. West Coast ports were closed between January 17 and February 20 as longshoremen's strikes resumed.

Supplementary import gains included feeder cattle and calves, beef, pork, sugar, cashew nuts, tobacco, and wine. Due to sharply higher prices, imports of feeder cattle (weighing 200-700 pounds) rose nearly a third in value from last year to \$66 million, while volume moved up 13 percent to 593,000 head. Increased prices for feeder calves pushed import values up 37 percent to \$3.7 million; quantity gained 22 percent to 61,000 head. The increase in feeder cattle imports came mainly from Mexico.

Boneless beef imports advanced 14 percent in value to 402 million; the quantity rose 7 percent to 752 million pounds. Most of the additional boneless beef purchases came from Central America and the Dominican Republic. Canned hams and shoulders from Europe accounted for much of the increase in pork imports. Entries of prepared beef, mutton, and lamb were well below year-earlier levels. Prepared beef and fresh chilled lamb imports were affected by last fall's labor difficulties at U.S. ports and by the import surcharge between August and December.

Fresh and prepared vegetable imports in July-February were slightly above last year's levels. Shipments of fresh cucumbers and peppers from Mexico fell. However, some vegetable products including beans, carrots, onions, peas, squash, tomatoes, turnips, olives, and canned mushrooms were higher. Fruit imports were fractionally higher. Smaller entries of fresh and frozen strawberries, apples, oranges, grapes, melons, and canned pineapples were offset by higher imports of fruit juices (apple and frozen orange juice concentrate), fresh grapefruit, and canned mandarins.

Complementary agricultural imports advanced 4 percent over corresponding months last year. Green coffee volume gained nearly one-fourth, while value rose 6 percent to \$816 million. Tea imports were more than one-third higher at \$48 million. Crude rubber entries gained 22 percent in volume and 4 percent in value. Banana and cocoa bean values declined.

1/ Based on 359 classifications in 1971. 2/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 variant of the seasonal Method II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

1/ Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all others, about 98 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and vegetable fibers. 2/ Based on 430 classifications in 1971. 3/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. The new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 variant of the Seasonal Method II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and in transit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$499 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
